

# IBM DB2 at UW

(a mini-tutorial)

School of Computer Science  
University of Waterloo

# DB2: what is it?

DB2 is a relational DBMS and a set of tools:

- a command-line interface to SQL
- an ESQL preprocessor for C language

This tutorial covers (briefly):

- How do I run it?
- Useful hints
- What if something goes wrong?

DB2 documentation:

⇒ will be available on-line from the course web page

# First Steps

- DB2 is available on `linux.student.cs.uwaterloo.ca`  
`ubuntu1604-002.student.cs.uwaterloo.ca`  
`ubuntu1604-006.student.cs.uwaterloo.ca`  
`ubuntu1604-008.student.cs.uwaterloo.ca`  
find the updated server names on your assignment question

- your environment should be set up correctly:

`sh, bash, et al:`

```
$ source ~db2inst2/sqlllib/db2profile
```

`csh, tcsh, et al:`

```
$ source ~db2inst2/sqlllib/db2cshrc
```

- you don't need any DB2 password

Every CS348 student must have an account on `linux.student.cs`

# First Steps (example)

```
softbase.cs$ ssh ubuntu1604-002.student.cs.uwaterloo.ca
```

```
[...]
```

```
$ source ~db2inst2/sqllib/db2profile
```

```
$ db2
```

```

```

```
Command Line Processor for DB2 Client 11.1.1.1
```

```
[...]
```

For more detailed help, refer to the Online Reference Manual.

```
db2 =>
```

# Connecting to a Database

```
db2 => connect to cs348
```

## Database Connection Information

```
Database server          = DB2/LINUX8664 11.1.1.1
SQL authorization ID     = DAVID
Local database alias     = CS348
```

```
db2 =>
```

**cs348** is the name of a database managed by DB2 for this class

# Executing Queries

SQL statements can be entered directly at the db2 => prompt.

```
db2 => select aid,name \  
db2 (cont.) => from david.author
```

AID	NAME
1	Toman, David
2	Chomicki, Jan
3	Saake, Gunter

3 record(s) selected.

ending line with \  
ending with (<cr>) executes the query.

\*\*\*\*\* you will need this for your Assignments \*\*\*\*\*

# What tables are there?

```
db2 => list tables
```

Table/View	Schema	Type	Creation time

[...]

Note: Some commands are operating system specific and may not be available.

For further help: ? db2-command - help for specified command  
                  ? OPTIONS      - help for all command options  
                  ? HELP         - help for reading help screens

The preceding three options can be run as DB2 <option> from an OS prompt.

Scary, but **very comprehensive** help system

# More HELP

## What do these funny error codes (e.g., DB21034E) mean??

```
db2 => blah blah
```

```
DB21034E  The command was processed as an SQL statement
because it was not a valid Command Line Processor command.
During SQL processing it returned: SQL0104N  An unexpected
token "blah" was found following "BEGIN-OF-STATEMENT".
Expected tokens may include: "<values>".  SQLSTATE=42601
```

```
db2 => ? DB21034E
```

```
DB21034E  The command was processed as an SQL statement
         because it was not a valid Command Line Processor
         command.  During SQL processing it returned:
```

```
Explanation:  This message is displayed before the SQL error
message. The error may be caused by a syntax error in
a non-SQL command.
```

```
User Response:  Correct the error and resubmit the command.
```

# Command Line Usage

Syntax: db2 <command>

```
$ db2 list tables
```

7 record(s) selected.

special characters (e.g., \*) have to be quoted

# Scripts

To run code from a file `batch.file` use:

```
$ db2 -f batch.file
```

```
<DB2 messages here; input is NOT echoed>
```

Sample SQL from classes `samples<n>.db2`

Results `results<n>.db2`  $\Rightarrow$  all from the “lectures” web page

This will be necessary for submitting your SQL assignments: you'll have to submit an `a<n>.sql` file which will then be *tested* by the TAs using the above.

# Problems

Look if DB2 is running (this is how a healthy DB2 looks like):

```
$ ps -ef | grep db2
db2inst2  4896      1 0 May18 ?        00:00:03 /lib/systemd/...
db2inst2  4897    4896 0 May18 ?        00:00:00 (sd-pam)
root      5110      1 0 May18 ?        00:00:00 db2wdog
db2inst2  5112    5110 0 May18 ?        00:02:51 db2sysc
root      5118    5110 0 May18 ?        00:00:00 db2ckpwd
root      5119    5110 0 May18 ?        00:00:00 db2ckpwd
root      5120    5110 0 May18 ?        00:00:00 db2ckpwd
